Introduction

This document is designed to assist data users in determining geographic patterns and demographic relationships by counties for the Lubbock Retail Trade Area. It should be noted that when **Sample Data** is included on the map this indicates that the data is based upon a sample rather than 100% counts. The sample data was obtained from those persons that received the long form.

In a very few cases the Census Data was not available. For median values for the total area a weighted average was used to determine the estimate. These median value estimates should have an error factor of less than 2% due to this type of estimation. Also in the Census of Agriculture some data was suppressed at the county level and estimates were based upon other data that was not suppressed and historical data. Those estimates should have an error factor of less than 5% at the county level and less than 0.5% at the total area level. All data that are estimates are designated as such on the appropriate maps.

Key Definitions

1. A **household** is defined as the person or persons occupying a housing unit.
2. A **family** is defined as two or more persons, including the householder, who are related by birth marriage, or adoption and live together as one household.
3. A **housing unit** is a house, apartment, mobile home or trailer, group of room or single room occupied as a separate living quarter or if vacant intended for occupancy as a separate living quarter. Both occupied and vacant housing units are included in the housing unit count. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand.
4. **Persons in group quarters** are persons in living arrangements such as nursing homes, college dormitories, or prisons that are not households.
5. A **farm** is any place from which \$1,000 or more of agricultural products were produced and sold or normally would have been sold during the census year.
6. **Median** is the division of a set of data that has an equal number of values above and an equal number of values below the median.
