

Save Your Drains

CAN THE GREASE

Pouring fats, oils, and grease (FOG) down the drain clogs plumbing and can cause sewage to overflow into your home or neighborhood.

Sewage overflows are hazardous to public health and the environment. Clean up and repairs are costly. FOG comes from food like cooking oil, meat drippings, butter, sauces, gravy, dairy products, and even salad dressing.

Follow 3 simple steps, and prevent costly sewage overflows in the future.

SCRAPE IT

Dishes and pots coated with greasy leftovers should be wiped or scraped clean prior to washing or placing in the dishwasher.

BAG IT

Place fat trimmings from meat in a plastic bag and discard them with your trash, rather than dumping down the garbage disposal.

CAN IT

Never pour grease down the drain! Instead, place cooled grease and oils in a sealed container and dispose of it with your garbage.

For commercial disposal of grease, please call us for more information.
